

MLops

Make life easy

Common problems with scaling ML

Getting started

Mundane steps with
lots of boilerplate

Iterating quickly

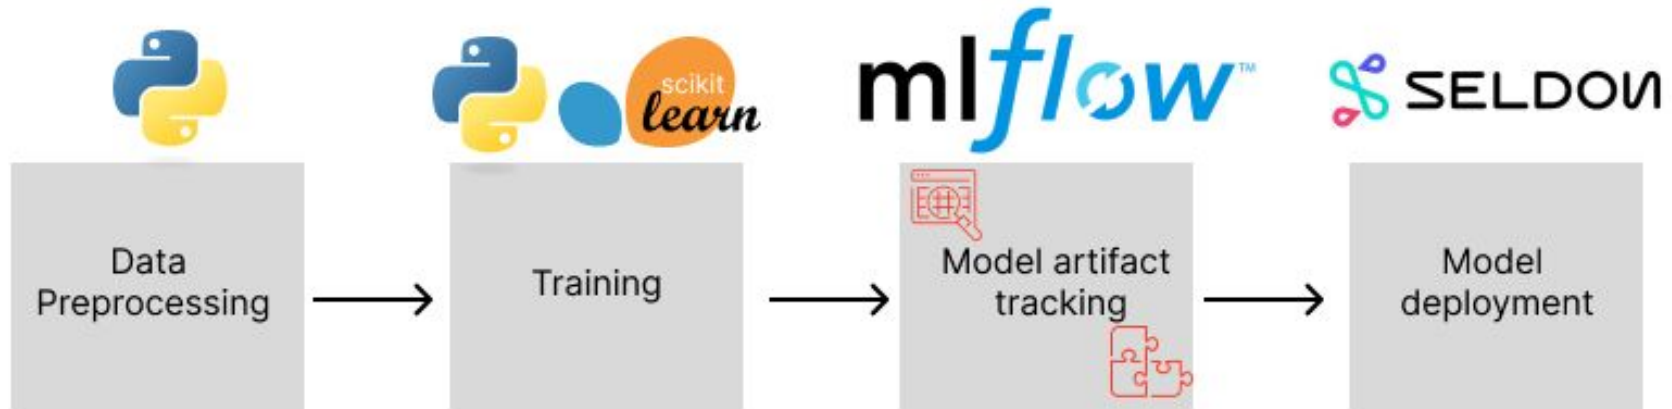

Slow redundant
iterative development

Hard to experiment and
compare different
models/algorithms

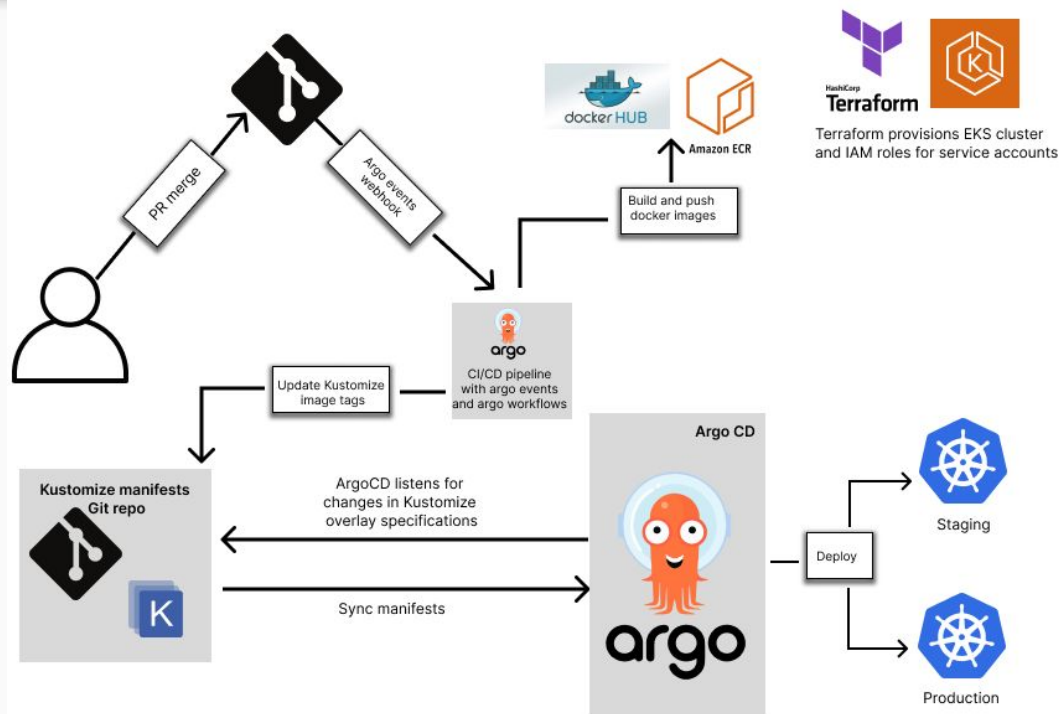

Productionizing

Incorporating ML
models into production
backend and handing
off to engineers is very
manual and
bottlenecked

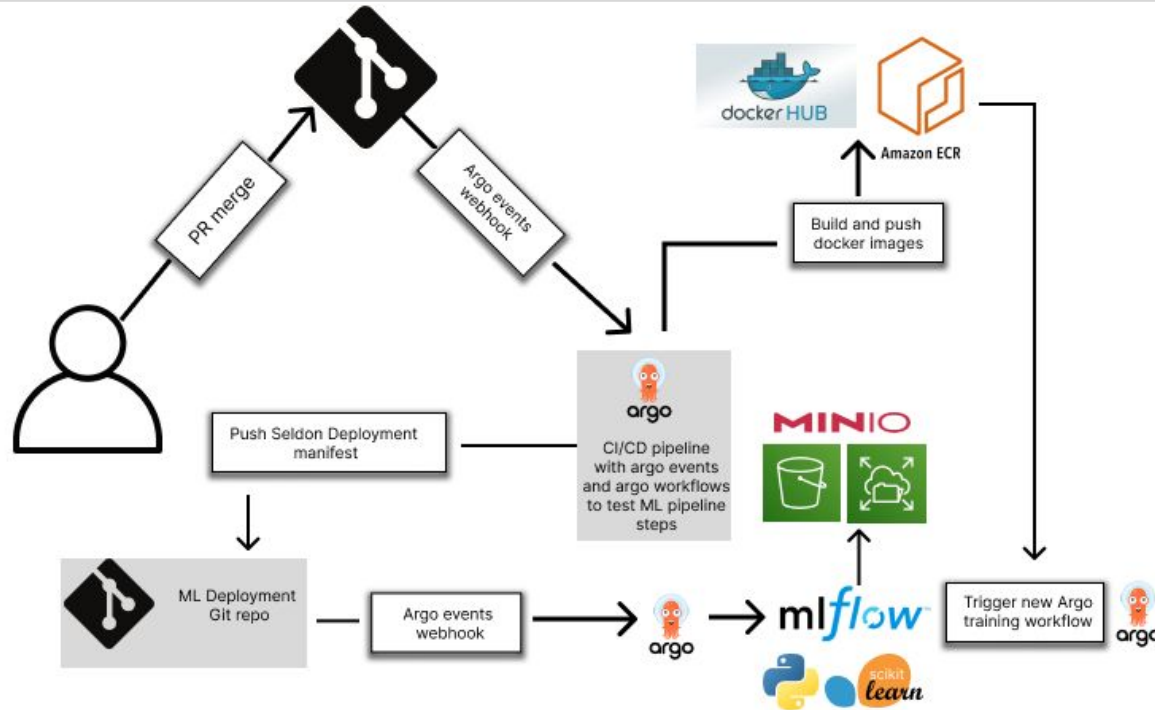

Machine learning as composable units

Gitops CI/CD for any software product

CI/CD for ML training pipeline

CICD of the inference pipeline
